

UIPATH AGENTHACK - MAESTRO CASE TRACK

SwarmOps Case Commander

Governed agent swarms for enterprise case work.

Bounded agents

Human approval

Audit-ready
evidence

PROBLEM

Enterprises want agent speed without agent chaos.

Procurement, finance, HR, claims, and customer operations all contain exception-heavy workflows where unbounded agents are risky.

Approvals

Risky business actions need human control.

Evidence

Every recommendation needs an audit trail.

Stages

Work has to move through governed case states.

SOLUTION

A case command center for bounded agent work.

- Turn a messy request into a staged case.
- Delegate safe analysis to specialist agents.
- Pause state-changing actions for human approval.
- Compile every output into evidence JSON.

DEMO SCENARIO

Vendor onboarding and rush purchase approval.

Onboard Northstar Components as a new vendor for a \$48,500 rush purchase. Validate risk, prepare approval, and create the procurement handoff.

WORKFLOW

Six stages from intake to audit.

1. Intake

**2. Vendor Data
Review**

**3. Compliance
Check**

**4. Purchase
Approval**

**5. Fulfillment
Handoff**

6. Final Audit

AGENT ROLES

Every agent has one scope and one evidence trail.

Intake

Normalize
request

Vendor Data

Check
completeness

Compliance

Flag policy risk

Approval Summary

Draft memo

Evidence

Build audit
trail

HUMAN GATE

High-risk actions stop until a person approves.

Blocked action

Approve vendor setup after missing artifacts are collected.

```
pending_human_approval -> approved_for_handoff
```

UIPATH FIT

**UiPath owns orchestration.
SwarmOps returns evidence.**

SwarmOps	UiPath
Case stages	Maestro Case stages
Human approval gate	Human task
Safe agent work	Robot/API step
Evidence JSON	Case artifact
Final status	Case completion state

TECHNICAL PROOF

The local prototype is already running.

- Runnable dashboard with seeded case data.
- Five bounded agent outputs.
- Approval state transition verified.
- Pending and approved evidence JSON generated.
- Smoke and interaction checks passing.

BUSINESS IMPACT

Agent adoption needs governance before scale.

SwarmOps helps operations leaders use AI agents in real workflows without giving up control over approvals, risk, or auditability.

Procurement

Vendor onboarding and purchase approvals.

Finance

Exception review and audit handoffs.

HR / Claims

Document-heavy case processing.

CODEx CONTRIBUTION

Agent-assisted build work is documented.

- Bounded swarm architecture and governance.
- Hackathon strategy and target selection.
- Local prototype and validation scripts.
- Evidence artifacts and submission package.

NEXT STEP

Connect the prototype to UiPath Automation Cloud.

- Maestro Case stages.
- Human approval task.
- Robot/API handoff to SwarmOps evidence JSON.
- Case artifact attachment.
- Final demo video under 5 minutes.
